DETAILED ACTION

Drawings

Figure 3 should be designated by a legend such as --Prior Art-- because only that which is old is illustrated. See MPEP § 608.02(g). Corrected drawings in compliance with 37 CFR 1.121(d) are required in reply to the Office action to avoid abandonment of the application. The replacement sheet(s) should be labeled "Replacement Sheet" in the page header (as per 37 CFR 1.84(c)) so as not to obstruct any portion of the drawing figures. If the changes are not accepted by the examiner, the applicant will be notified and informed of any required corrective action in the next Office action. The objection to the drawings will not be held in abeyance.

Claim Rejections - 35 USC § 112

The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

Claim 11 is rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

Claim 11 is ambiguous because it purports to be both apparatus and method.

Claim Rejections - 35 USC § 101

35 U.S.C. 101 reads as follows:

Whoever invents or discovers any new and useful process, machine, manufacture, or composition of matter, or any new and useful improvement thereof, may obtain a patent therefor, subject to the conditions and requirements of this title.

Claim 11 is rejected under 35 U.S.C. 101 because the claimed invention is intended to embrace both apparatus and method. Such claim is precluded by language of 35 U.S.C. 101, which sets forth statutory classes of invention in alternative only. See *Ex parte Lyell*, 17 USPQ2D 1548.

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 1-10 are rejected under 35 U.S.C. 103(a) as being unpatentable over Applicant's admitted prior art, Figure 3, in view of Jusuf et al. (Patent No. 6,266,000).

Applicant's admitted prior art, Fig.3, discloses the claimed invention as recited (see also Specification, page 11, line 17-page 13, line 3) except for the induction of an analog power signal through D/A converter in lieu of the induction of the PWM signal through pulse width modulator (140). However, this feature is well-known in the illumination control art as evidenced by Jusuf et al. (Patent No. 6,266,000) which discloses in Fig.3 an apparatus having a controller means or D/A converter 320 for inducing an analog power signal to the lamp assembly (300-304) through switches (310-314). It would have been obvious to a person having ordinary skill in the art at the time the invention was made to employ the analog power signal as taught by Jusuf into the applicant's admitted prior art (Fig.3) type apparatus. This can be done by replacing applicant's admitted prior art's PWM signal with the Jusuf's analog power signal. Thus,

it would allow an overall brightness or intensity control, thereby achieving uniform color balance over a range of operating characteristics.

Conclusion

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Lys, Patent No. 6,292,901; Krietzman et al., Patent No. 6,533,436; Baretz et al., Patent No. 6,600,175.
